It currently consists of 4 contigs. The true order of the places is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     nucleic search, using sw model

                                                                                                                                                                                                                                                                                                                                                                                   FESULT
                                                                                                                                                                                                                                                                                                                                                                         consistences, which are receptors for interleukin-13 (IL-13) alpha receptor. The invention relates to new purified peptides comprising 380 or 427 amino control sequences, which are receptors for interleukin-13 (IL-13); the 380 cm. 427 aa proteins are designated IL-13R beta and alpha respectively. The IL-13R beta has high affinity for IL-13R beta and alpha respectively. Such acquires high affinity when associated with the IL-4 cm ceptor. Nucleic acids encoding IL-13R beta and alpha are used as CC diagnostic probes to identify aberrant synthesis or genetic anomalies control as loss of heterozygosity and rearrangements, or chromosomal control as loss of heterozygosity and rearrangements, or chromosomal control as loss of heterozygosity and rearrangements, or chromosomal control as a loss of heterozygosity and rearrangements, or chromosomal control as loss of heterozygosity and rearrangements, or chromosomal control as loss of heterozygosity and rearrangements, or chromosomal control and alpha which can be used for production of recombinant IL-13R beta and alpha which can be used as IL-13 antagonists, specifically to contain the complete responses for treatment of inflammation and control in the production of IL-13. receptors are also useful as antisense molecules for gene continuoussays) to diagnose diseases associated with abnormal expression of IL-13 receptors, when coupled to a toxin also for treatment of overproduction of IL-13R. Cells that express IL-13R at the surface are used to identify ligands and modulators of IL-13R.
